

IN THE CLAIMS:

Please cancel claims 1 -63

Please add the following new claims:

64. (New) A supporting device comprising:

a base having a front rail and a rear rail extending between a first end and a second end and being collapsible between a transport position and a support position; and

a wheel mechanism pivotably connected to one of said ends and being pivotable between a rolling position and a working position for allowing quick and easy transportation of said device.

65. (New) A device as set forth in claim 64 further including a pivot engaging said wheel mechanism and said base for allowing said wheel mechanism to rotate between said rolling position and said working position.

66. (New) A device as set forth in claim 65 wherein said pivot is further defined as a pin engaging said wheel mechanism and said base.

67. (New) A device as set forth in claim 64 further including a locking device between said wheel mechanism and said base for locking said wheel mechanism in said rolling position and unlocking said wheel mechanism to allow said wheel mechanism to rotate into said working position.

68. (New) A device as set forth in claim 67 wherein said locking device is further defined as including a locking pin between said wheel mechanism and said base.

69. (New) A device as set forth in claim 67 wherein said wheel mechanism further includes a wheel brace extending between said front rail and said rear rail and engaging said locking device.

70. (New) A device as set forth in claim 69 wherein said wheel brace has slots for receiving said front rail and said rear rail, each of said slots being U-shaped to allow said locking device to extend therethrough and to secure said wheel mechanism to said front and rear rails.

71. (New) A device as set forth in claim 69 wherein said wheel mechanism further includes a pair of wheels having a wheel support extending between said wheels and being connected to said wheel brace for transporting said device .

72. (New) A device as set forth in claim 71 further including a wheel extension connecting said wheel support to said wheel brace such that as said wheel extension pivots, said wheel mechanism extends a predetermined amount below said base to allow for insertion of the work piece within said clamping area.
